

## Welcome!

**iTrona GmbH** is a young and dynamic engineering company specialized in designing and developing industrial electronic solutions.

Our engineers are highly experienced in the development of hard- and software for micro processing devices and installations.

We are specialized in Real-Time-Programming (Assembler, C, C++ etc.) of microcontrollers of the family TI (MSPxxx), NEC, Motorola and Hitachi.

Various integrating projects for Bus-connections over M-Bus, EIB, LON, according to IEC 61'107 standard (RS232, RS484, optic), as well as TCP/IP connections have already been implemented including the surveillance, evaluation, analysis and control software.

Additionally, we design and program hard- and software to control, surveille and visualize industrial installations (by PC or Siemens PLC, SAIA, Selectron etc.) developed to meet our customers' individual requirements.

We are a team of experienced engineers in energy issues, electronics and industrial computing who have created effective electronic solutions for customers for several years.
